# Before Getting Started...

V12 Tutorial: Fixed Formatting
Forced "U.S.-centric" settings

Ini (text) files are used; mixing formats can cause problems.

- **Time separator ' : ' colon** (also used as RA/Dec separator)
  RA: 12:45:22.6 Dec: +05:32:57.9   UT: 04:52:30 (leading zeros/24-hour)

- **Date separator ' – ' dash** **Date order yyyy-mm-dd**
  May 12, 2023: 2023-05-12 (leading zeros)

- **Decimal point ' . ' period**
  Value = –0.45587 (leading zero for |x| < 1.0, no thousands grouping)

- **Millimeters for focal lengths; meters for apertures (30 cm = 0.30 m)**

V12 Tutorial: Multi-image Asteroid Photometry
TutorialsProfile: View Me First!

TutorialsProfile.mp4

- How to create a user-profile that is *required* for many other tutorials.

MPO YouTube channel **https://youtube.com/@8734Warner**

V12 Tutorial: Multi-image Asteroid Photometry
ImageForm: View Me Next!

ImageForm.mp4

- Used in all image measuring programs.
- "Sticky" image scaling and zoom.
- Set flat, dark, bias frames.
- Set aperture sizes and shapes.
- Automatch image.
- Supports only FITS images.

MPO YouTube channel *https://youtube.com/@8734Warner*

Concentrate on the Process

V12 Tutorial: Multi-image Asteroid Photometry
Working with the Example Images

- **Concentrate on the Process**
  - **Exact duplication of results may not always happen.**
    - For example, the point is not which stars are initially selected for comp stars, but which stars will used.
    - Trace significant differences in results back to the step where things "went wrong."
- **Assumed Paths**
  - **"MPOV12" = Path to the MPO v12 installation, e.g.,**
    - ***MPOV12\.\.\ = C:\MPOV12\Examples\Canopus***

V12 Tutorial: Multi-image Asteroid Photometry
Working with the Example Images

- Concentrate on the Process
  - Exact duplication of results may not always happen.
    - For example, the point is not which stars are initially selected for comp stars, but getting a valid set of comp stars.
    - Trace significant differences in results back to the step where things "went wrong."
- Assumed Paths
  - "MPOV12" = Path to the MPO v12 installation, e.g.,
    - MPOV12\Examples\... = C:\MPOV12\Examples

Outlining the Steps

V12 Tutorial: Multi-image Asteroid Photometry
What's Covered

Measuring Images
- Set configuration profile
- Review Images (optional)
- Select asteroid on image 1
- Select asteroid on image 2
- Create session
- Select comp stars
- Select SBG stars (optional)
- Measure Images

Lightcurve analysis in separate tutorial

Reviewing/Selecting Images

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Review: Yes

- **Yes**

  Create and display thumbnails of each selected image.

- **No**

  Load selected images without review.

Paths, not full images, are saved in memory.

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Scaling: Compressed

• **Normal**

Applies v10 "Normal" standard deviation display image scaling.
Good if no bright object dominates

• **Compressed**

Applies v10 "Compressed" standard deviation display image scaling.
Better for showing faint stars and targets

**Applies to all images from here on.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Image Size Scaling: 75%

• **Default value for all images from here on.**
• **Can be reset or overridden at any time.**

Set the value based on row/column pixel counts of the image and display monitor resolution.

V12 Tutorial: Multi-image Asteroid Photometry
## Reviewing and Selecting Images

Measuring Apertures

- Inner Width/Height
- Dead Zone
- Sky annulus width
- Rotation
- Color

- Target: 13/13/5/13/0 Yellow

- Comps: 13/13/2/13/0 Fuchsia

- Astrometry: 13/13/2/13/0 Aqua

V12 Tutorial: Multi-image Asteroid Photometry
## Reviewing and Selecting Images

Every X images: 1

- Must be > 0.

- If > 1, then a subset of images is loaded.

- X = 3, selecting images 1 – 99, Images 1, 4, 7, ... 99 are selected.

- Use > 1 only if subset is useful.

V12 Tutorial: Multi-image Asteroid Photometry
### Reviewing and Selecting Images

Load Flat Frame

- **Click <Flat>, select "Load"**
- **Navigate to**

    MPOV12\.\.\Asteroid_LC\A154244
- **Select AUS_MEDIAN_4.FIT**

- **"LED" Colors (all frames)**
    - **Gray: No frame loaded.**
    - **Green: Frame loaded and used.**
    - **Red: Frame loaded, _not_ used.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Select Images

- **Click <Files>**
- **Navigate to**

MPOV12\.\.\Asteroid_LC\A154244\20230613
- **Select _all_ images**

- **Generally, select the first and last image to be measured _and all those in-between just as if assuming Every X = 1_.**

- **The program "does the math" to create the subset.**

V12 Tutorial: Multi-image Asteroid Photometry
## Reviewing and Selecting Images

Select Images

MPOV12\.\.\Asteroid_LC\A154244\20230613

- **Select *all* images**

- **Generally, select the first and last image to be measured *and all those in-between just as if assuming Every X = 1*.**

- **The program "does the math" to create the subset.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Load Selected Images

- **Click <Open>.**

- **Message to right of <Accept> reports progress, e.g., "20 of 67."**

- **Click now highlighted <Abort> to stop loading. Images loaded to the point are displayed.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images
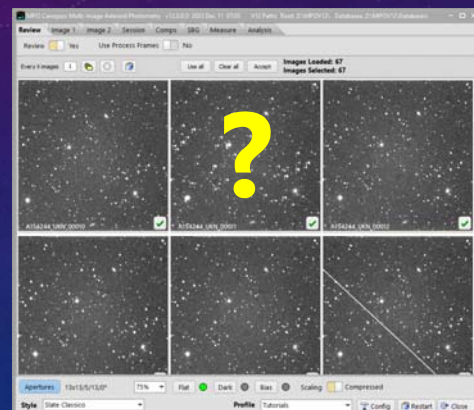

Don't Like Subset

- **Click <Trash Can> to clear all images.**

- **Select new set of images by clicking <Files> again.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Look for "Bad Images"

- **Scroll down list to look for images that shouldn't be measured.**

- **Look for trailing, satellites/planes going through the field, clouds, etc.**

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Look for "Bad Images"

- **Double-click on an image in the list to show a larger version.**

- **Image is trailed. Rejected!**

- **Click <Close>**

V12 Tutorial: Multi-image Asteroid Photometry
### Reviewing and Selecting Images

Rejecting "Bad Images"

- **Click on <Check> in first image to be excluded.**

- **Ctrl+Shift+Click on <Check> in last image to be excluded.**

V12 Tutorial: Multi-image Asteroid Photometry
### Reviewing and Selecting Images

Rejecting "Bad Images"

- To extend a *contiguous* range of images, Ctrl+Shift+Click on the "new last" image to be excluded.

- To exclude another image after the contiguous range, click on <Check>.

- Ctrl+Shift+Click on an image further down the list to create a new *contiguous* set that starts with image the image just selected.

- Note that the "Images Selected" numbers change as you select and deselect images.

V12 Tutorial: Multi-image Asteroid Photometry
Reviewing and Selecting Images

Accept the Selected Images

- A subset of 46 images has been selected.

- The number of images you select may be more or less but shouldn't be more than ±1-3.

- Click <Accept> to process the list and move to the Image 1 page.

Image 1: Setting the Target

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Search: None

- **None**
  Attempts to find only the asteroid derived from the FITS header.

- **Find (slow)**
  Attempts to find all asteroids in the field above a magnitude limit and sigmas above the sky value.

- **List**
 Attempts to find asteroids in a list of those known to be in the field.

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Search: None

- **None**
  Attempts to find only the asteroid derived from the FITS header.

- **Find (slow)**
  Attempts to find all asteroids in the field above a magnitude limit and sigmas above the sky value.

- **List**
  Attempts to find asteroids in a list of those known to be in the field.

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Search: None

- **None**
  Attempts to find only the asteroid derived from the FITS header.

- **Find (slow)**
  Attempts to find all asteroids in the field above a magnitude limit and sigmas above the sky value.

- **List**
  Attempts to find asteroids in a list of those known to be in the field.
V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Zero flag only: No

- **No**
  Includes all stars regardless of sextractor flag.
  e.g., involved with star, etc. Flag > 0.

- **Yes**
 **Includes only stars with a sextractor flag = 0.**

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Catalog: ATLAS
Filter: C
Band: PR

- **Recommended for all asteroid photometry and astrometry.**

- **Uses Gaia (DR2) astrometry and proper motions.**

- **Systematic errors in PanSTARRS griz magnitudes very low.**

- *Do not change filter and/or band after Automatching Image 1.*

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

**CI Band: VR**
CI: 0.45

- **If observing with filters, use a color index that includes two of the filters. "Clear" is *not* a valid color index filter.**

- **0.45 is the value used in the LCDB if the actual value is not known. It is a compromise. For critical work, use the actual value if known.**

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

- **Click <Load>**

- **Wait for image to load *and* try to find asteroid.**
  Wait time depends on computer, size of image, etc.

 - **Use <menu> to expand or collapse zoom/profile sidebar.**

Zoom/Profile Sidebar

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Available Asteroids List

- **Shows all asteroids found in image.**

- **Object to measure is "key" target.**

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Available Asteroids List

- **Shows all asteroids found in image.**

- **Object to measure is "key" target.**

- **To fix position, click on the target in image then click <Recycle>.**

Expand Zoom/Profile panel and use zoom window to get the best update.

V12 Tutorial: Multi-image Asteroid Photometry
Image 1: Setting the Target

Available Asteroids List

• **Shows all asteroids found in image.**

• **Object to measure is "key" target.**

• **To fix position, click on the target in image then click <Recycle>.**

  Expand Zoom/Profile panel and watch zoom window to the best update.

• **Click <Accept> to go to Image 2.**
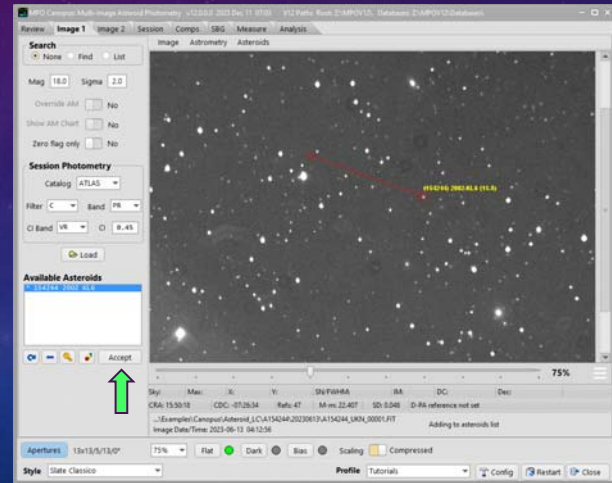

Do NOT Click <Load> on Image 2

Image 2: Confirming the Target

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target
Session Mode: New Target/Comps

- **New Target and Comps**
  New session with undefined target and comps.

- **New Target, Previous Comps**
  New session with undefined target using comps from existing session.

- **Add/Edit Existing Session**
  Add to or edit (remeasure) observations for an existing session.

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target
Session Mode: New Target/Comps

- **New Target and Comps**
  New session with undefined target and comps.

- **New Target, Previous Comps**
  New session with undefined target using comps from existing session.

- **Add/Edit Existing Session**
  Add to or edit (remeasure) observations for an existing session.

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

**Session Mode: New Target/Comps**

- **New Target and Comps**
  New session with undefined target and comps.

- **New Target, Previous Comps**
  New session with undefined target using comps from existing session.

- **Add/Edit Existing Session**
  Add to or edit (remeasure) observations for an existing session.

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Session Info: Name: [empty]

- **Used only if target name different from the one derived from FITS header or the selected "key" target if multiple targets in image.**
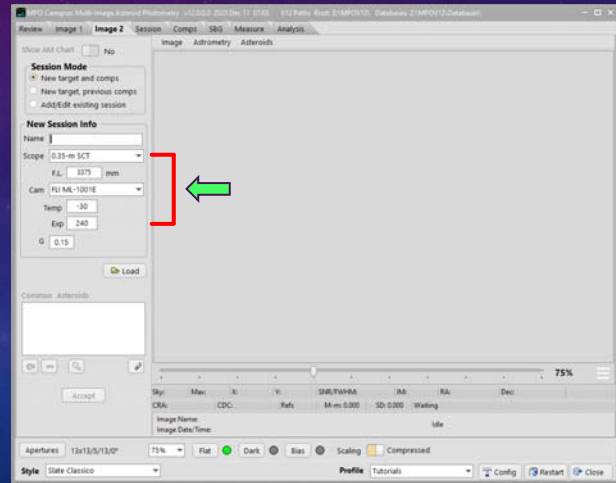

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Session Info: Confirm Equipment

- **Change Telescope info if default values are incorrect.**

- **Change Camera info if default values are incorrect.**

- **Exposure (in seconds) is taken from FITS header; edit *only* if exposures are *known* to be different.**
  *The exposures for **all** images in the session **must** be the same as the new value.*

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Session Info: G: 0.15

- **Use MPC default unless using a known different value.**

- **Changing *G* changes corrections for phase angle; this changes derived magnitudes during period analysis.**

- **Can be overridden during analysis.**

*All sessions used during period analysis for the target **must** use the same value of G. If that value is different from the value in session records, update the session records using SessionManger.*

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

- **Click <Load>**

- **Wait for image to load *and* try to find asteroid.**
*Wait time depends on computer, size of image, etc.*

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Common Targets Form

- **Confirm highlighted object is the same as on Image 1.**

- **Click <Accept> on Common Targets form.**

- **To fix position, click on the target in image then click <Recycle>.**
*Expand Zoom/Profile panel and use zoom window to get the best update.*

24

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Create Session

- **Click <Accept> on Main form.**

- **Wait for form to go to the Sessions page.**
 *This may take a few seconds and the form may disappear or go black. PATIENCE!*

V12 Tutorial: Multi-image Asteroid Photometry
Image 2: Confirming the Target

Create Session

- **Click <Accept> on Main form.**

- **Wait for form to go to the Sessions page.**
  This may take a few seconds and the form may disappear and/or go black. This depends on the CPU load and hard drive speed.
  BE PATIENT!

Confirming the Session

V12 Tutorial: Multi-image Asteroid Photometry
Confirming the Session
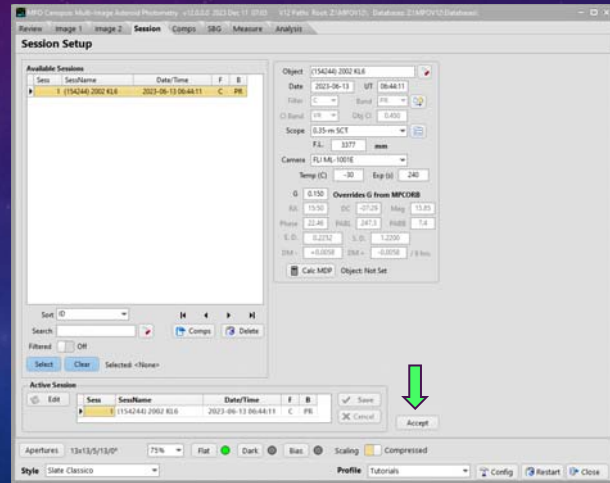

Review Session

- **Confirm telescope, camera, and *G*.**
- **To Change a Setting: *Use caution.***
  - **Click <Edit>.**
  - **Change Scope, Camera, F.L., Camera, and *G*.**
  - **If *G* is changed, click <Calc MDP>**
  - **Do not change any value *unless you are certain that it is significantly wrong.***
  - **Click <Save> (save changes) or <Cancel> (keep original values).**

Disabled

Disabled

V12 Tutorial: Multi-image Asteroid Photometry
Confirming the Session
Accept Session

- **Click <Accept> to accept session.**
  Program goes to Comps page.

Selecting Comp Stars

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

- **Min SNR: 25**
  - **Minimum SNR for a star to be considered acceptable comp star candidate.**
  - **Must also be from Priority = 1 star catalog (ATLAS in this case), unless too few stars, and then Priority = 2 stars are used.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

- **Sat %: 60**
  - **Percent of maximum pixel value.**
  - **16-bit max: 65,535 x 0.6 = 39,231**
    Config Sat % = 90, i.e., saturation value >= 58,982. 60% limit is well below saturation.
  - **Helps avoid comp star saturation as air mass (and extinction) decreases.**
 - **Helps avoid always using first brightest 15 stars.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

- **Min Comps: 3**
  - **The more the better.**
  - **Maximum allowed is 15.**
  - **Consider the number of stars in the field; don't set the value *too* high.**

# V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

- **Solar: Checked**
  - **Solar = $0.45 \leq$ B-V ≤ 0.95**
  - **For asteroids, use solar-color stars even if applying transforms now or latter.**
  - **Helps minimize errors due to color differences.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

- **Click <Select> to start auto-select process.**
 - Comps selection will appear after very short time.

  Have Patience!

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

**Reviewing & Editing Comps List**

- Selected comps are enclosed in orange circles and numbered.
- Comps appear in list at upper right.

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

**Reviewing & Editing Comps List**

- **If all comps are good, click <Accept> to go to the StarBGone page.**
- **Comp 5 is a galaxy and has a close companion.**
  - **Click on it in the list. It is enclosed in an aqua-color circle.**
  - **Click <minus>under the list to remove it.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

Reviewing & Editing Comps List

- **Galaxy is gone from list.**
- **Items below galaxy have been moved up one place.**
- **Number on image updated to match new places in list.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

A Good Comp 1
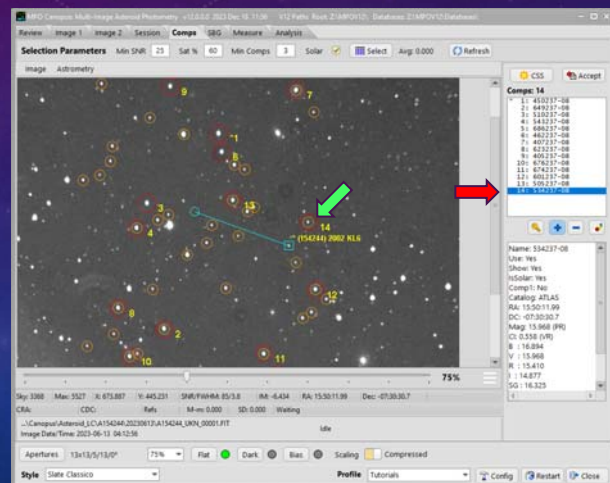

Comp 1 may be too bright and has a close companion.

- **Click on #1 in the list.**
- **Click <minus>.**
- **If one appears, dismiss a message about no Comp 1.**

V12 Tutorial: Multi-image Asteroid Photometry
## Selecting Comp Stars

Adding a New Comp 1

- **Click on unnumbered star in the image.**
- **Click <plus>.**
- **Star added to end of list and is numbered on the image.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

### Adding a New Comp 1

- **Click <key>.**

- **Star swaps places with old Comp 1 (red arrows) and is made Comp 1 (green arrows).**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting Comp Stars

Accept Comps List

- **Continue review process until all stars in list are "good."**

- **Have as many stars as possible, up to limit of 15.**

- **Click <Accept> when ready to move to StarBGone page.**

Selecting SBG Stars

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Bypass SBG Stars: Use SBG: No

- **Click <Accept>**
V12 Tutorial: Multi-image Asteroid Photometry
## Selecting StarBGone (SBG) Stars

Use SBG: Yes

- **No**
  Measure images "as-is", i.e., without regard to stars intruding into the measuring apertures.

- **Yes**
  If a star intrudes into the target dead zone or measurement aperture, either ignore the image or subtract the star's contribution to the value within the measuring aperture.

V12 Tutorial: Multi-image Asteroid Photometry
## Selecting StarBGone (SBG) Stars

Mode: Sub

- **Determines how selected SBG stars are handled.**

V12 Tutorial: Multi-image Asteroid Photometry
## Selecting StarBGone (SBG) Stars

Mode: Sub

- **Skip**
  If a star intrudes into the target dead zone or measurement aperture, skip the image.

- **Sub**
  If a star intrudes into the target dead zone or measurement aperture, subtract the star's contribution to the value within the measuring aperture.

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Selecting SBG Stars

- **Click <Select>.**

- **After a few seconds, the asteroid path on Image 1 is shown as aqua-colored line.**

- **All stars within two Dead Zone diameters of the path are enclosed by red circles.**
V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Checking Image 1 and 2

**If field shifts significantly, SBG stars on Image 2 may not be on Image 1.**

- Click <2> radio button.
- Click <1> radio button.

Image 1

Image 2

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars
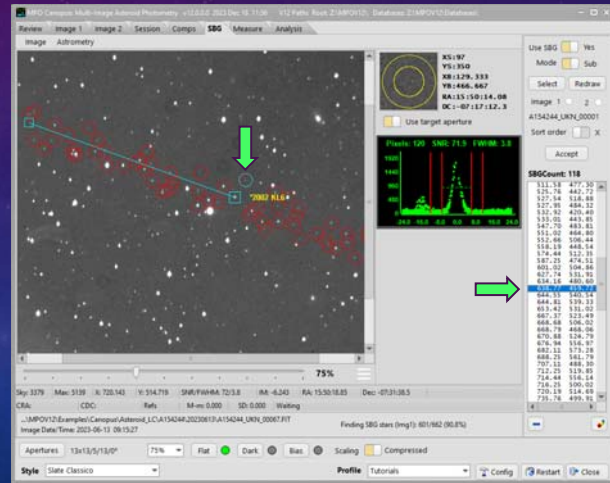

Dropping Uninvolved Stars

- **Not required but can same some processing time if there is a large number of SBG stars.**

- **Stars to right of asteroid start on Image 1 never involved.**

Never approached by asteroid

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Sort Order: X

- **X**
  Merged list of Image 1 and 2 stars sorted by X-value. Good if motion is mostly left-right.

- **Y**
  Merged list of Image 1 and 2 stars sorted by Y-value. Good if motion is mostly up-down.

Never approached by asteroid

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Finding First Uninvolved Star

- **List is merged, so X-value might be on Image 1 or 2.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

**Finding First Uninvolved Star**

- **Click on a star in list.**
- **Aqua circle surrounds it on image.**
- **Find star with X just beyond start of asteroid path.**

V12 Tutorial: Multi-image Asteroid Photometry
## Selecting StarBGone (SBG) Stars

Finding First Uninvolved Star

- **Do not click on list.**
- **Scroll to bottom of list.**
- **Shift+Click on last star in list.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Finding First Uninvolved Star

- **Click <minus>.**
- **Answer "Yes" to dialog question.**

V12 Tutorial: Multi-image Asteroid Photometry
Selecting StarBGone (SBG) Stars

Accept List

- **Deleted stars gone from Images 1 and 2.**
- **Click <Accept> when ready to go to Measurements page.**

Measuring the Images

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images – Getting Setup
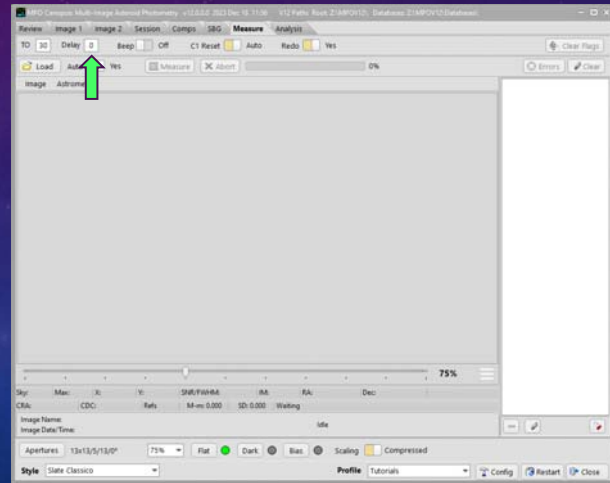

TO (time-out): 30

- **Maximum number of seconds to wait for an image to automatch.**

- **Should be 10 to 60 seconds.**

V12 Tutorial: Multi-image Asteroid Photometry
## Measuring the Images – Getting Setup

Delay: 0

- **Seconds to pause between images when "C1 Reset" = Auto.**

- **0 sec = 1/6 second; a small pause is required to allow Windows to process images.**

V12 Tutorial: Multi-image Asteroid Photometry
## Measuring the Images – Getting Setup

C1 Reset: Auto

- **Determines the action taken if Comp 1 cannot be found automatically, e.g., image shifted too far.**

V12 Tutorial: Multi-image Asteroid Photometry
## Measuring the Images – Getting Setup
C1 Reset: Auto

- **Auto**
  If Comp 1 is not found, the program tries to find it after doing an automatch. If not found, a manual override can be done.

- **Manual**
  If Comp 1 is not found, the measuring pauses to allow *Shift+Click* on star in the image to reset the Comp 1 position. A message asking to verify the new position allows accepting or reselecting Comp 1.

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images – Getting Setup
Redo: Yes

- ### Yes
  If image with date/time within 1.5 seconds of existing record, the existing record is overwritten.

- ### No
  If image with date/time within 1.5 seconds of existing record, the image is bypassed, i.e., it is not measured.

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images – Getting Setup
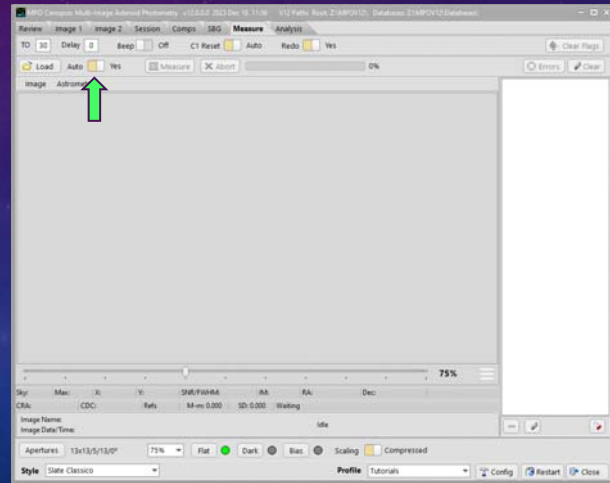

Loading the Images

- **Click <Load>.**

- **Images selected on Review page are loaded into list, sorted by ascending date/time.**

- **Only the paths are stored in the list and memory.**

- **Each image is loaded one-at-a-time on demand.**

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images – Getting Setup
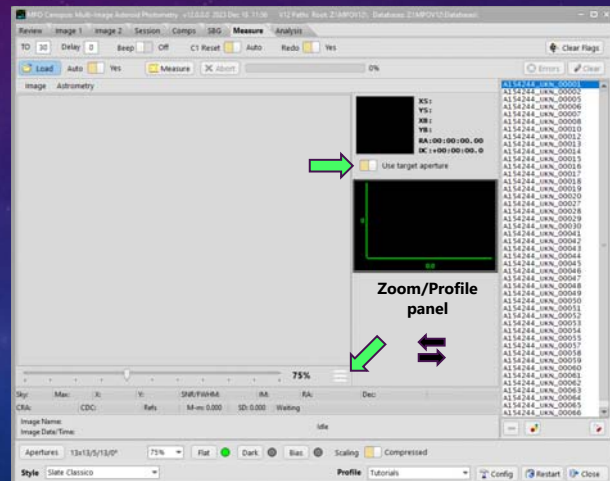

Auto: Yes

- **Yes**
  After an image is measured, the next image in the list is automatically loaded and measured.

- **No**
  After an image is measured, the program waits for an <Enter> on the keyboard before loading and measuring the next image.

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images – Getting Setup

### Apertures: Use target apertures

- **Use Target Apertures**
  Aperture shown next to <Apertures> are used to measure the target.

- **Use Comps Apertures**
  The current comp star apertures are used to measure the target.

- Requires showing (temporarily at least) the zoom/profile panel.

Zoom/Profile panel

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images

**Measure the Images**

- **Double-click on the first image in the list to see it before starting.**

- **Click <Measure>.**

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images

Measure the Images
- **Click <Abort> to stop processing.**

- **Use <flashlight> to toggle color coding legend.**

- **Be kind to the program and your CPU! Avoid do other things in this or other programs when measuring.**

- *Don't click on the images list; at best, this can change which is the current and next image.*

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images

## To Measure More Images

- **Click <Restart>. This is a *must*.**

- **Clear All**
  Clears all internal lists and variables along with the selected images list from the Review page.

- **Keep Review**
  Clears all internal lists and variables but keeps the selected images list from the Review page. Good if measuring more than one target in same set of images.

V12 Tutorial: Multi-image Asteroid Photometry
Measuring the Images

**To Measure More Images**

- **Click <Restart>. This is a *must*.**

- **Clear All**
  Clears all internal lists and variables along with the selected images list from the Review page.

- **Keep Review**
  Clears all internal lists and variables but keeps the selected images list from the Review page. Good if measuring more than one target in same set of images.

V12 Tutorial: Multi-image Asteroid Photometry
Avoid Information Overload

Before Period Analysis

- Measure the other two nights for the asteroid in the examples.

It's Time to Take a Break!
